

## **SEBOTEK OVERVIEW**

### **Sebotek Product Lineup**

#### **PAC Voice-Q™-721**

Offering the latest in advanced, digital technology, the Voice-Q 721 is a premium device that fits losses up to 100 dB. It leads the industry in sound quality, speech clarity and performance. Among its features are:

- InFocus Noise Manager.
- IntelliSound™ 128 Channel Adaptive Noise Reduction that analyzes noise levels in 128 individual channels (100-14,000 Hz) and automatically reduces audible noise and distortion without unnecessary signal manipulation.
- AFX™ Feedback Eliminator with Adaptive Feedback Cancellation provides maximum feedback protection without degrading audio quality.
- Ultra-Wideband Dual Directionality ensures great performance and natural sound even in challenging environments.
- 8-Band Graphic Equalizer.
- 4 Channel WDRC.
- 4 Customizable Memories.
- Programmable Power On Delay.
- 17 Lifestyle Environments
- Low Battery Indicator

#### **PAC Voice-Q™-720**

The Voice-Q 720 fits losses up to 90 dB and offers many premium-level benefits without premium cost. Its benefits include:

- InFocus Noise Manager.
- AFX™ Feedback Eliminator provides maximum feedback protection without degrading audio quality.
- Ultra-Wideband Dual Directionality ensures great performance and natural sound even in challenging environments.
- 4 Channel WDRC.
- 4 Customizable Memories.
- 16 Lifestyle Environments
- Low Battery Indicator

#### **PAC Voice-Q™-510**

A mid-range device to fit losses up to 95 dB, the Voice-Q 510 is more cost effective than the Voice-Q 720 or 721. It offers:

- InFocus Noise Manager.
- AFX™ Feedback Eliminator provides maximum feedback protection without degrading audio quality.
- 6 Band Graphic Equalizer.
- 2 Channel WDRC.
- 2 Customizable Memories.
- 8 Lifestyle Environments
- Low Battery Indicator

#### **PAC Voice-Q™-410**

SeboTek's most cost effective device for fitting losses up to 80 dB and an ideal choice for those with high frequency loss. Among its benefits are:

- InFocus Noise Manager.
- AFX™ Feedback Eliminator provides maximum feedback protection without degrading audio quality.
- 6 Band Graphic Equalizer.
- 2 Channel WDRC.
- 1 Customizable Memory.
- 5 Lifestyle Environments

#### **Infocus Lifestyles™ Fitting Software**

Providing patients with outstanding hearing care is a complex process. Choosing, fitting and programming the right hearing instrument are parts of this process. VitaSound's focus is on simplifying this part, permitting more time for patient care.

SeboTek's patented speaker-in-the-canal design eliminates many traditional device fitting challenges and complaints. The modular design does not require impressions, molds and plastic shells, eliminates the occlusion effect and feedback, while providing natural comfort and cosmetic appeal. SeboTek's Pro-VES™ Fitting Software, with advanced, proven fitting algorithms and AutoFit feature, allows programming quickly, but accurately, for each hearing loss. The InFocus Lifestyles software further enhances, yet simplifies, the fitting process.

Single-click access to sophisticated algorithms for 17 different environments allows customization of up to 4 different memories (model dependent) to match the lifestyle of your patient. The software used in the fitting process actually invites patients to be involved in their hearing instrument programming to provide them the best possible experience based on their lifestyle.

Single click simplicity. Yet, you still have access to Fine Tuning controls. You also have easy access to other time-saving features such as Auto Relate, enhanced Copy/Balance functionality and adaptive feature controls—all designed to help make your job easier.

And because InFocus Lifestyles is so intuitive, it makes fitting fast and efficient, leaving more time for counseling and patient care.

- Noah 2.0 and 3.0 compatible
- Helpful product selection screen
- Overlay audiogram on products fitting range
- View product features for easy selection
- Access to complete technical specifications
- Hover help
- AutoFit instruments to hearing loss with single click (both ears, all memories)
- Access previous settings
- View both ears on the Fitting Screen
- Customize your screen preferences
- Real time programming
- Simple, single-click programming for your patient with InFocus Lifestyles
- Reminder icons for Lifestyle memories
- Easy access expanded fitting controls
- Copy/Balance and Auto Relate functions
- Helpful fine tuning suggestions

### **Service and Repair**

With cerumen (ear wax) the most common cause of hearing instrument malfunction, SeboTek's Clear-Sound™ Wax Guards are easily replaceable to ensure ongoing performance. When repair is necessary, the modular design means you can offer same day service. In instances where you need to send in the patient's device in, you can fit a loaner device because there are no custom molds. It is that simple.
